Description of current waste site condition:

(What is the current physical state of the site? What activities have been performed?)

Subsite 118-F-8:2 is the cocooned, 105-F Reactor Core. For remediation purposes, the 105-F Reactor building (WIDS Sitecode 118-F-8) was divided into subsites. All of the other subsites have been remediated and Interim Closed Out.

Basis for reclassification:

(How does the site meet the reclassification status?)

This waste site (subsite) is being Reclassified to Rejected because it does not meet the WIDS database scope, as described in Section 2.0 of TPA-MP-14, Rev. 2.

Section 2.0 states that WIDS does not document buildings or facilities that do not contain TSD units. It further states that, after buildings are demolished, the footprint will be evaluated for potential soil contamination. If present, the soil contamination will be added to WIDS as a Discovery Site.
